- 5 - very easy

Report of a usability test concerning a web prototype

What are the main usability problems of this site?

4 respostas

none

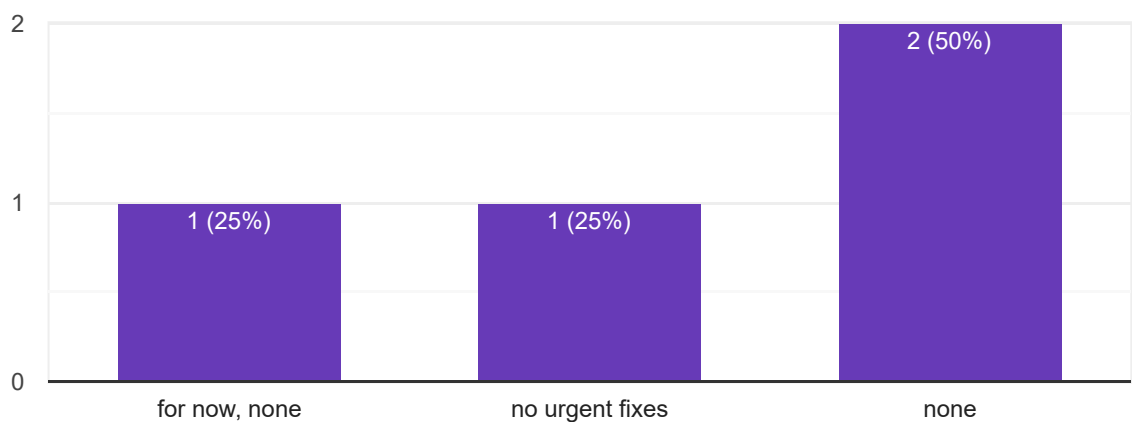

A lot of things are static, like adding/editing a car and rating a stand. Hopefully the final app let's us write inside the app

Before starting the form, i was given a few minutes to test the prototype. I realized that an account settings is not implemented. Maybe it would be a good idea to implement that in case a client wants to change email or password

very static, but is a prototype

What urgent fixes would you recommend?
